Legoland Windsor Sensory Room

Organisation details

Description of activity

LEGOLAND have opened a new permanent sensory space at their Windsor Resort for guests with sensory needs to enjoy.

The all-new Total Sensory Space in Heartlake City is the first dedicated sensory facility of its kind to be installed in a theme park in the UK.

It is designed to provide a calming environment for guests with additional needs to escape to for a peaceful and quiet experience, away from the noise and bright lights of the resort's 55 rides, live shows and attractions.

The space includes interactive sensory experiences, with vibrating bean bags, soft seating, interactive projections, bubble tubes, infinity tunnels, tactile panels, and soft lighting, all designed to create a calm space to relax in for those who need it.

The UV room allows guests to discover brighter colours, fibre optics, and UV mats, whilst the main space includes musical sound pads, activity panels to manipulate, and an interactive carpet, all part of the overall sensory experience on offer.

The space was designed and created by Total Sensory, market leaders in providing calming sensory rooms. The calming environment was created with guests' needs in mind, giving them a place to relax. Total Sensory provide sensory space projects across a range of sectors, including schools, care homes, hospices, and now for the very first time in a theme park at the LEGOLAND Windsor Resort.
